

# SYSTIMAX Category 6 CPR Class Cca and Class B2ca enhancements

## *Europe Communication*

Effective October 15, 2018

CommScope is pleased to communicate some exciting enhancements to the existing SYSTIMAX “CPR-Euroclass B2ca/Cca” Cat 6 U/UTP cable offering in Europe.

### **6% reduction of jacket outer diameter**

The reduced jacket diameter will provide customers with pathway space limitation concerns higher fill ratios, reduced footprint and weights associated with larger cables.

### **Addition of a “We-Tote Box” package option**

The option to order the higher rated CPR cables in our most popular package option “We-Tote box” will be a welcome addition. Installers, Distributors and End-Users will appreciate having a choice that best fits their particular needs.

Although CPR Euroclass Cabling is still in its infancy; Commscope is continually striving to enhance our ability to service our customers and provide better features and opportunities to reduce the costs associated with installation, shipping/storage and handling.
