# IFDB

Base Product

IFDB Indoor Fiber Distribution Box

The compact **IFDB Plug & Play floor boxes** offer a pay-as-you-grow solution that is perfectly suited for phased 'homes passed/homes connected' network rollouts. The base box can be installed at the 'homes passed' deployment. Duringthe 'homes connected' rollout, the first customer can be connected directly to the base box. Additional customers can easilybe connected later by adding a splitter module to the base box.

The compact **IFDB Spliced boxes** allow splicing those fibers from an indoor riser cable to the individual drops. The IFDB enclosures allow fibers fromcertain riser cables to be broken out without interrupting the strength member by making a small window cut, providingeasy handling and fast installation. IFDB enclosures are available in two dimensions: IFDB-S and IFDB-M

The compact **IFDB Connectorized boxes**offer fast deployment and easy customer connection. The larger IFDB-M floorbox offers a clear 'homes passed' deployment. The new fiber management system is especially designed for easyfiber routing and storage. Once all splices are made, connections can be managed by less specialized installationcrews. During the 'homes connected' rollout, the customer can easily be connected by patching connectors to
the floor box. The patch panel offers operators ultimate flexibility.

Benefits:

- Compact & esthetic design
- Easy installation
- Highly reliable, low maintenance and easy access

Product Classification

Regional Availability	EMEA
Product Type	Fiber wall box
Product Series	IFDB

General Specifications

Functionality	Patching | Splicing | Splitting
Color	Light gray
Mounting	Floor | Wall

Material Specifications

COMMSCOPE®

IFDB

Material Type	Thermoplastic

Environmental Specifications

Environmental Space	Indoor
Flammability Rating	UL 94 V-0
Qualification Standards	IEC 60529, IP30

Packaging and Weights

Packaging Type	Bag | Carton

COMMSCOPE®
